Panama

Panama's Sustainable Production and Resilience for Food Security and Rural Development

Faced with the growing demand for food and the deterioration of productive conditions, derived from global warming and the degradation of natural resources, the Government of Panama, has focused its efforts on the development of programs and projects to leverage, strengthen and modernize the sector, providing the tools and technological and financial support, as well as the improvement of the technical and administrative capacities of the agricultural producer, aimed at the comprehensive adaptation of their productive systems, towards an agriculture climate-smart, low in polluting emissions, resilient to changes, so that it is sustainable by guaranteeing the food and nutritional security of the population, within the framework of environmental conservation and the socio-economic growth of the rural sector.

Worldwide Events: Tuesday 23 February 2021

Please note that all timings are GMT + 4, and subject to final confirmation

Peru

Quinoa: Peruvian Superfood of the Future Cultivated in the Past

Quinoa is an ancestral food that has its origins in the high Andean regions of South America. At present, Peru is a key center of the largest variety of quinoa seeds –more than 3,000 varieties–, and the main producer and exporter worldwide. In this video, you will understand the main importance of this Andean grain for a world facing the challenges of climate change and threats to food quality in the context of population growth. The “golden grain of the Incas” that fed the first pre-Columbian cultures is a metaphor about the wisdom of the past turned into a promise for the future, a millenary legacy that will help humanity.
